PondGard™ EPDM membrane

1. Description
The Firestone PondGard™ EPDM 1.0 mm (.040”) liner is a cured single-ply synthetic rubber membrane made of ethylene-propylene-diene terpolymer (EPDM). It is available in a variety of panel sizes. Depending on the dimensions of the liner, the waterproofing surface may be seamless (up to 930 m²). In other situations, seams can be made using a self-adhesive tape.

Because of its specific formulation and production process, only the PondGard EPDM membrane is guaranteed to be compatible with aquatic life in accordance with testing reports published by the Water Research Centre in the UK.

2. Preparation
Product: allow the membrane to relax for approximately 30 minutes before splicing.
Substrate: the substrate needs to be smooth, dry and free of sharp objects, oil, grease and other materials that may damage the membrane.

3. Application
Install the PondGard EPDM membrane in accordance with Firestone specifications and details.

4. Coverage
The dimensions of the membrane are calculated to cover the base of the reservoir, slopes and anchor trenches, including seam overlaps.

5. Characteristics

Physical
- Elastomeric membrane with a good combination of high elasticity and tensile strength
- Retains its flexibility at low temperature (-45°C)
- Resists to temperature shocks up to 130°C
- Excellent resistance to alkali rains
- Excellent resistance to UV radiation and ozone concentration
- Contact with some kind of oils, petroleum products, hot bitumen and grease must be avoided

Technical
- Base: Synthetic rubber
- Color: Black
- Solvents: None
- Solids: 100 %
- State: Cured

7. Precautions
Take care when moving, transporting or handling to avoid sources of punctures and physical damage. Isolate waste products, such as petroleum products, greases, oils (mineral and vegetable) and animal fats from the PondGard EPDM membrane.
